

# Kazura Kenzo

Data Analyst | Toronto, ON

+1 647-510-7234 | [kazurakenzo@gmail.com](mailto:kazurakenzo@gmail.com) | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

With 3-4 years of experience in SQL, Python, and Power BI, I excel in maintaining data quality, reporting, and ETL workflows. I build dashboards and automated data pipelines that turn raw, unstructured data into clear, decision-ready insight. Bilingual in English and French, with a foundation in IT infrastructure and a portfolio of end-to-end data engineering and analytics projects. Seeking a data analyst, business intelligence, or analytics engineering role in the Toronto area.

## WORK EXPERIENCE

---

### Data Localization Analyst

January 2025 – Present

*Mindy Support – North York, ON (Remote)*

- Reviewed and validated multilingual text datasets against linguistic quality standards, logging errors by type and severity (terminology, grammar, mistranslation, omission) to enable consistent, repeatable evaluation across languages.
- Wrote SQL queries and used Excel to aggregate quality-assurance results, detecting recurring error patterns by language and category and converting flagged issues into trackable, reportable metrics.
- Built and maintained Power BI dashboards tracking error rates, quality scores, and translation-quality trends over time, giving reviewers and team leads a clear view of where data quality was slipping.
- Automated repetitive cleaning and reformatting of language datasets using Excel Power Query and Python scripts, reducing manual preparation time and minimizing copy-and-paste errors.
- Applied structured QA workflows with consistent pass/fail criteria, maintaining high data accuracy across multilingual datasets before content was approved for delivery.

### IT Infrastructure Intern

May 2025 – August 2025

*I&M Bank – Kigali, Rwanda (commercial bank, 1,000+ staff)*

- Assisted deployment and configuration of enterprise network infrastructure, including routers, switches, and wireless access points across branch environments.
- Supported firewall rule reviews and VPN configuration, and resolved 10–15 Tier 1 and Tier 2 support tickets daily under SLA targets.
- Documented network layouts and IP address allocations, improving asset tracking and reducing time spent diagnosing connectivity issues.
- Assisted with server patching and backups, supporting system availability and gaining practical exposure to VLAN configuration, subnet design, and switch management.

### Bilingual Helpdesk Analyst

January 2024 – June 2024

*The Bradford Exchange – London, ON*

- Provided bilingual (English/French) technical support, resolving 20+ customer tickets daily while maintaining a 95%+ customer satisfaction rating.
- Assisted with HTML and CSS updates to customer-facing pages, reducing recurring UI-related support issues.
- Authored internal troubleshooting documentation that reduced repeat tickets by 18% and shortened onboarding time for new agents.

## TECHNICAL SKILLS

---

**Programming & Querying:** SQL, Python (Pandas, NumPy), Java, JavaScript, R (basic)

**Data & BI Tools:** Power BI, Tableau, Microsoft Excel (Power Query, PivotTables), SQL Server, DAX

**Data Engineering:** ETL pipeline development, Apache Airflow, Apache Spark (PySpark), PostgreSQL, data modeling, data warehousing, Databricks

**Cloud Platforms:** Amazon Web Services (AWS – EC2, S3, IAM), Microsoft Azure (Azure SQL, Blob Storage)

**Infrastructure & Systems:** Networking fundamentals, VLANs, VPN configuration, Windows administration

**Tools & Workflow:** Git, Docker, Jira, Streamlit, VS Code, Agile / Scrum

**Languages:** English (Fluent), French (Fluent – IB Bilingual Diploma)

PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------|
| <b>Toronto Airbnb ETL Pipeline</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Python, Airflow, PostgreSQL, Docker |
| <ul style="list-style-type: none"><li>• Built a containerized end-to-end ETL pipeline ingesting 15,000+ Toronto Airbnb listings, transforming raw data with Python and Pandas into a PostgreSQL star schema (fact table plus dimension tables).</li><li>• Orchestrated weekly extract-transform-validate runs with Apache Airflow DAGs, enforcing a data-quality gate (<math>\geq 70\%</math> row retention) before marking a run successful; deployed via Docker Compose and surfaced through a Streamlit dashboard.</li></ul> |                                     |
| <b>TTC Bus Delay Dashboard</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Power BI, Power Query, DAX          |
| <ul style="list-style-type: none"><li>• Analyzed 58,000+ Toronto transit delay incidents from City of Toronto open data in Power BI, cleaning and shaping the data with Power Query and building DAX measures for KPI cards and trend visuals.</li><li>• Identified the most-delayed routes, peak delay days, and leading delay causes (emergency operator issues accounting for 44% of incidents), presented across an interactive dashboard.</li></ul>                                                                        |                                     |
| <b>Coach-Fit – Full-Stack Data App</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | React, TypeScript, Node.js, MongoDB |
| <ul style="list-style-type: none"><li>• Developed a full-stack fitness-tracking web app that captures granular workout data (sets, reps, weight, RPE) and surfaces trends, muscle-balance insights, and consistency scores through an analytics dashboard.</li><li>• Integrated an AI layer to generate personalized recommendations from logged history; secured with JWT authentication and deployed live on Vercel.</li></ul>                                                                                                |                                     |
